

Lisprocoin

White paper Lisprocoin

Abstract

Lispocoin is a cryptocurrency based on blockchain technology that allows secure and fast transactions without the intermediation of third parties.

Lisprocoin was born on the polygon blockchain [Lisprocoin \(Lsp 20\) Token Tracker | PolygonScan](#)

contract number:0x70E546c7a2cA4495cFcbE263a3b6D5-ce68B2204C

with Total Supply
2,000,000,000,000 Lsp 20

It is estimated that the market cap could reach= 584,957,820\$

The Circulating Market Cap = 92,086,519\$

Lispocoin's consensus system is based on a proof-of-stake (PoS) algorithm, which guarantees greater energy efficiency than cryptocurrencies based on proof-of-work (PoW). Lispocoin is designed to be used as a medium of exchange and investment.

Introduction

Lispocoin was created to provide an alternative to existing traditional currencies and cryptocurrencies. Our mission is to create a secure, fast and reliable cryptocurrency that can be used worldwide.

Contract Security

Contract source code verified

This token contract is open source. You can check the contract code for details. Unsourced token contracts are likely to have malicious functions to defraud their users of their assets.

No proxy

There is no proxy in the contract. The proxy contract means contract owner can modify the function of the token and possibly effect the price.

No mint function

Mint function is transparent or non-existent. Hidden mint functions may increase the amount of tokens in circulation and effect the price of the token.

No function found that retrieves ownership

If this function exists, it is possible for the project owner to regain ownership even after relinquishing it

Owner can't change balance

The contract owner is not found to have the authority to modify the balance of tokens at other addresses.

No hidden owner

No hidden owner address was found for the token. For contract with a hidden owner, developer can still manipulate the contract even if the ownership has been abandoned.

This token can not self destruct

No self-destruct function found. If this function exists and is triggered, the contract will be destroyed, all functions will be unavailable, and all related assets will be erased.

No external call risk found

External calls would cause this token contract to be highly dependent on other contracts, which may be a potential risk.

Honeypot Risk

Buy Tax: 0.00% Sell Tax: 0.00%

Above 10% may be considered a high tax rate. More than 50% tax rate means may not be tradable.

This does not appear to be a honeypot.

We are not aware of any malicious code.

No codes found to suspend trading.

If a suspendable code is included, the token maybe neither be bought nor sold (honeypot risk).

Holders can sell all of the token

Holders can sell all of the token. Some token contracts will have a maximum sell ratio.

The token can be bought

Generally, these unbuyable tokens would be found in Reward Tokens. Such Tokens are issued as rewards for some on-chain applications and cannot be bought directly by users.

No trading cooldown function

The token contract has no trading cooldown function. If there is a trading cooldown function, the user will not be able to sell the token within a certain time or block after buying.

No anti_whale(Unlimited number of transactions)

There is no limit to the number of token transactions. The number of scam token transactions may be limited (honeypot risk).

Anti whale can not be modified

The maximum trading amount or maximum position can not be modified.

Tax cannot be modified

The contract owner may not contain the authority to modify the transaction tax. If the transaction tax is increased to more than 49%, the tokens will not be able to be traded (honeypot risk).

No blacklist

The blacklist function is not included. If there is a blacklist, some addresses may not be able to trade normally (honeypot risk).

No whitelist

The whitelist function is not included. If there is a whitelist, some addresses may not be able to trade normally (honeypot risk).

No tax changes found for personal addresses

No tax changes were found for every assigned address. If it exists, the contract owner may set a very outrageous tax rate for assigned address to block it from trading.

Technology

Lispocoin uses blockchain technology to ensure the security and transparency of transactions. Our consensus system is based on the proof-of-stake (PoS) algorithm, which allows network participants to validate transactions and receive rewards proportional to their participation.

Lispocoin is developed using the Lisp programming language, which offers greater flexibility and security than other programming languages. Our cryptocurrency is compatible with most exchange and wallet platforms.

Advantages of Lispocoin

Lispocoin offers many advantages over traditional currencies and other cryptocurrencies:

- **Security:** Lispocoin transactions are encrypted and secure thanks to blockchain technology.
- **Speed:** Lispocoin transactions are fast thanks to the PoS algorithm, which guarantees greater energy efficiency compared to PoW-based cryptocurrencies.
- **Decentralization:** Lispocoin does not depend on a central bank or central authority, but is managed by the community of participants.
- **Investment:** Lispocoin is designed to be used as a means of exchange and investment, providing profit opportunities to participants.

Lisprocoin Token Factory

You can issue a fixed amount of erc20 tokens with one-click.

Furthermore, the Lisprocoin foundation plans to increase investor earnings by injecting additional capital from the revenues due from the creation of new smart contracts on its platform <https://lisprocoin.net>.

Conclusions

Lispocoin is a secure, fast and reliable crypto-

currency designed to be used as a medium of exchange and investment. Thanks to the blockchain technology and the PoS algorithm, Lispocoin offers many advantages over traditional currencies and other cryptocurrencies. Lispocoin is developed using the Lisp programming language, which offers greater flexibility and security than other programming languages. Lispocoin is the future of cryptocurrencies
